

## **VENOUS VALVE APPARATUS AND METHOD**

### **ABSTRACT**

Embodiments of the invention provide for a unidirectional flow valve. For  
5 example, embodiments of the invention include a method of providing a unidirectional  
flow valve to a vein that include folding a first portion of a vein over an adjacent second  
portion of a vein and engaging at least two opposing areas of the second portion of the  
vein to adjacent areas of the first portion of the vein. The at least two opposing walls of  
the second portion of the vein define the unidirectional flow valve. At least one support  
10 device may be inserted into the folded valve region of the vein to maintain the folded  
configuration of the valve.
